Summary

Product Designer working across interaction design, user research, and visual design for complex digital products. At twin3, owned onboarding and agent-permission workflows for a 6K+ user AI platform, with research-driven iterations contributing to a 20% increase in task completion. Brings additional experience in data-informed product design, usability testing, design systems, and AI-assisted development, with work spanning shipped product features and independently built web experiences.

Professional Experience

twin3 — AI/UX Researcher, Product Alignment Team *(Remote)* Jan 2026 – Present

- Owned the Soul Wizard onboarding flow and the wallet / agent permission screens end to end — research, information architecture, user flows, UI design, and post-launch iteration — for an AI-agent marketplace serving a 6K+ alpha community
- Proposed and argued the interaction decisions with the founding team, and designed around engineering's platform constraints, including the engineer-facing side of the authorization flows; collaborated on visualizing the Twin Matrix user model
- Reworked onboarding and permission framing after community testing with 36 alpha builders, who named both as friction points; research on agent trust and task delegation shipped as product changes and contributed to a 20% increase in task completion

LINE Taiwan — Project Assistant Intern, B2B Marketing *(Taipei, Taiwan)* May 2024 – Jan 2025

- Conducted interviews and surveys with enterprise users, translating user needs into recommendations that informed SMB self-serve advertising experiences and campaign strategy
- Facilitated 20+ stakeholder workshops to validate user journeys, surface requirements, incorporate feedback, and align design decisions with business goals

Capital Futures — UX Intern, Digital Growth Team *(Taipei, Taiwan)* Jun 2023 – Sep 2023

- Restructured information architecture and navigation for a data-rich futures trading platform using personas, journey mapping, and heatmaps, and contributed reusable interaction patterns to the company's design system
- Conducted A/B testing and iterative design refinements based on behavioral data and product metrics, increasing user engagement by 16%

Projects

Stories to You – Elderly Care Therapeutic Toy System Mar 2023 – May 2024

- Led interview planning and ran the usability sessions at a care centre for a four-person capstone team building a therapeutic toy system for older adults
- Redesigned the graphical assembly manual across 3 testing rounds with 33 participants; the number who completed assembly unaided rose from 3 to 24. Silver Winner, International Design Awards 2024

Door Face App – Smart Home UX Design Project Feb 2026 – April 2026

- Designed user flows, wireframes, high-fidelity interfaces, and prototypes across access, identity verification, security, and device management, working from personas and task analysis
- Heuristic analysis and usability testing surfaced 5 issues, 3 of them high-severity; all 5 were resolved in a two-phase redesign that also defined colour as a system-state language, so every status the lock reports has one fixed meaning

Dallas to Denver – Bilingual Road Trip Guide 2026

- Designed and built a live single-page guide from a 2,000-mile, four-state drive: information architecture for routes, stops, and pre-departure checklists, structured for reading on the road rather than at a desk
- Specified a Chinese/English toggle that drives both static markup and JS-rendered content from a single language state and persists across sessions; built in plain HTML, CSS, and JavaScript with Claude Code, no framework or routing library

Education

Arizona State University, Polytechnic Campus GPA: 3.83
MS in User Experience Aug 2025 – May 2027 (Expected)

National Taipei University of Business GPA: 3.4
BDes in Commercial Design and Management Aug 2020 – Jan 2025

Skills

Design: Interaction Design, User Flows, Wireframing, Prototyping, Information Architecture, Design Systems, Systems Thinking, Journey Mapping, Accessibility, High-Fidelity UI, Typography, Layout, Visual Hierarchy, Branding

Research & Analysis: User Research, Mixed-Method Research, Usability Testing, Interviews, Surveys, Heuristic Evaluation, Behavioral Analysis, A/B Testing, Product Metrics, Research Synthesis

Collaboration & Tools: Cross-functional Collaboration, Stakeholder Alignment, Workshop Facilitation, Design Reviews; Figma, Claude Code, AI-assisted Prototyping, Adobe Creative Suite, HTML, CSS, JavaScript, Git/GitHub, Python (Basic), Pandas, SQL
